Application/Control Number: 10/022,935 Page 2

Art Unit: 2616

1. Claims 3, 4, 21 and 34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, line 2, "the neighboring nodes' logical identifiers", and "the times", each lacks antecedent basis.

In claim 4, line 2, "the depth information" lacks antecedent basis.

In claim 21, line 2, "the logical identifier", "the depth and load parameters", line 3, "the identifier", each lacks antecedent basis.

In claim 34, line 4, "each Dedicated Mediation Devices" lacks antecedent basis; line 6, "a Mediation Devices" should read as -- the Mediation Devices --; line 9, "special identifier" should read as -- special logical identifier --. Furthermore, it is unclear as to what "a Dedicated Mediation Device" or "a Distributed Mediation Device" is. It is also unclear as to what the differences are between "a Dedicated Mediation Device" and "a Distributed Mediation Device".

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-4, 21-27 are rejected under 35 U.S.C. 102(e) as being anticipated by LEE et al in U.S Patent No. 6,982,960 B2, hereinafter referred as LEE.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

Application/Control Number: 10/022,935

Art Unit: 2616

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Referring to claims 1 and 22, LEE discloses a method for adding a new network node to a network, said method comprising: operating said new network node to discover neighboring nodes in the network (col. 4, lines 20-23); confirming symmetric communication links to neighboring nodes in the network (col. 4, lines 25-28); obtaining a logical identifier and selecting a parent node in the network for the new network node (col. 4, line 66 to col. 5, line 5); and operating said new network node to broadcast status information to the neighboring nodes in the network (col. 4, lines 59-64).

Referring to claims 2 and 23. LEE discloses that the step of operating said new network node to discover neighboring nodes in the network comprises: listening to messages transmitted between neighboring nodes in the network; collecting information about its immediate neighbors by listening to the messages; and recording the information in an initial neighborhood list (col. 4, lines 25-40).

Referring to claims 3, 4 and 24, Lee discloses that the information collected includes the neighboring nodes' logical identifiers, the times they will receive or transmit messages, and the depth and load information of the neighboring nodes if available (col. 4, lines 38-40).

Referring to claims 26 and 26, LEE discloses a further step of transmitting a "Hello" or "'W" message from said new network node to all of the neighboring network nodes, and the network messages include "Query" messages (col. 4, lines 25-28).

Application/Control Number: 10/022,935

Art Unit: 2616

Referring to claim 27, LEE discloses that the new network node operates as a Distributed Mediation Device (col. 5, lines 40-44).

- 4. Claim 33 is allowed.
- 5. Claims 5-20, 28-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Claim 34 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Feldman et al., Hart et al., Rochberger et al., Chandra et al., and Yemini et al. are all cited to show the common feature of data traffic routing in a nodal switching network utilizing different routing protocols and different topologies similar to the claimed invention.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpus H. Hsu whose telephone number is (571)272-3146. The examiner can normally be reached on M-F (5:30-3:00) First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wellington Chin can be reached on (571)272-3134. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
